

Information for Residents without a Separate Irrigation Meter

How much will it cost me to connect?

The only cost to the homeowner will be the expense to disconnect their irrigation system from their drinking water (potable) line and reconnect it to the reclaimed water meter. A plumber or irrigation specialist can give you an estimate on connecting to the reclaimed water system.

Is this program mandatory?

Yes, the program is mandatory for residents that use high quality potable water as their source for irrigation. Once notified that reclaimed water is available, residents will have ninety (90) days to complete the switchover.

How will I know when to connect my irrigation system to the reclaimed water meter?

You will receive a letter in the mail before construction begins informing you of various project dates and the projected date reclaimed water will become available. Once construction is complete, you will receive a letter directing you to connect to the system and schedule a cross-connection inspection. If you have any questions, please contact the Utilities Department at 407-905-3159.
